

Wherever you are. UCi2i

The future of visual communications

We help transform businesses by enabling them to use video conferencing as their everyday communications tool.

Enjoy around the clock, high quality service – real people, real support, in your language.

Keep things simple with our low-cost monthly subscription service plans with no hidden charges and unlimited usage.

Collaborate with our multi-party secure and supported Virtual Meeting Rooms.

Who we are

Put simply, we enable you to communicate face to face, wherever you are.

We're a global and independent video cloud service provider headquartered in London and Hong Kong. We help transform businesses by enabling them to use high definition video conferencing for reliable every day communications.

Saving you both time and money, with UCi2i, there's no need for infrastructure, specialist skill sets and support costs.

Our goal is simple – to offer an all-in-one affordable and fully supported video conferencing service for every type of organisation.

So whether you're new to using video conferencing, or have already invested in video conferencing, with our cloud service plans, we can make your investments go further and set you up for success, without all the technical headaches, infrastructure and man power needed to manage and support video.

We take care of all of this for you, with just one simple, fixed and low-cost monthly subscription fee, delivering a reliable, secure and fully supported high definition video experience like none other.

Our friendly support and sales team are here to help you make the most of video conferencing, contact your local regional office to find out more and trial our services for free.

What can video conferencing **cloud services** do for you?

Increase client and customer interaction

More face-to-face contact is the means of building closer business relationships with your customers and partners. Using video is the best approach to increasing your client and customer communications, and there's no need for you or your customers to implement any video infrastructure, so you can pass the benefits direct to them.

Collaboration and productivity

With collaborative video communications, things simply happen faster, reducing time to market and maximising every meeting and every decision. The internal benefits of video conferencing enhance performance and competitiveness, whilst also allowing companies to adapt quickly to change.

That all important work / life balance

Giving employees the flexibility to work from home, remotely, or on the move means greater well-being and a happier, more productive workforce, giving businesses a greater ability to retain staff and attract new generations of workers who are used to collaborative technologies.

Cutting costs

Using video minimises the need for local and international travel, saving both time and money, whilst also reducing your carbon footprint. Our services are offered at market beating rates, delivering an immediate and measurable return on investment.

Business growth

Video isn't just about saving money or increasing productivity. It's there to transform businesses. Standing still enables others to accelerate away from you. By virtualising your communications, your key to on-going success is just a small step away.

Virtual Meeting Rooms

As well as offering point to point communication services, our multi-seat, secure Virtual Meeting Rooms enable you to take your room with you everywhere you go, no matter what device you find yourself using.

Why UCi2i?

UCi2i is an ISO 27001 certified Video Cloud Service Provider like none other. Here's what makes us different...

- We don't sell video hardware and can partner with every vendor, so we can connect any standards based endpoint, no matter what manufacturer you or your customers use.
- We're affordable with simple, low-cost monthly subscription service plans with unlimited usage - as easy as your fixed mobile phone tariff.
- We have two simple Service plans - Connect and FlexPort. Decide how many of each you need, and you're ready to order and go.
- Our service integrates Skype for Business and Lync with traditional SIP/H.323 endpoints. No need for reinvestment to make the most of any existing standards-based kit.
- Browser-based video calling using WebRTC and non-WebRTC compatible browsers - Google Chrome, Firefox, Microsoft Edge, Internet Explorer and Safari. No barriers to video collaboration.
- Our services are fully supported, globally, meaning real people, speaking your language, are there to ensure you remain uninterrupted.
- You don't need to invest in expensive infrastructure or internal skill sets, because we do that for you.
- Our services are offered over our secure network and the cloud, delivering risk free, fail-safe video communications, so you can always depend on a reliable connection.
- We offer enhanced security with video call encryption and PIN protected Virtual Meeting Rooms.
- We monitor the quality of all our customers' calls with our VC-Report platform, so if there were any unlikely disruptions, we'll know about it as it happens and rectify the problem immediately.

Our Service Plans

Connect

One to one full video cloud services for video hardware endpoints and our VC-Connect software client (Windows and macOS) for desktop users. Each come with a unique video address for making and receiving HD video calls. Content sharing and encryption as standard.

FlexPort

When you buy a single FlexPort - you're buying a seat in a Virtual Meeting Room and you're also getting an address to call. You decide how many seats you need as a business in total, and how many seats are allocated to each address. It's really that simple.

What comes as standard?

- Subscription based, fixed monthly price.
- Any standards based video device registrations plus desktop and mobile solutions
- Interop with Skype for Business, Lync and Skype consumer clients.
- VC-Report, VC-Control, VC-Book and VC-Connect video client (desktop and mobile).
- Free streaming to 3rd party services
- Access to local in-country audio dial-in services
- 1st, 2nd and 3rd line support.
- Content and desktop sharing.
- Video call encryption.

Extra Options

- Our platform can be white-labeled should you want to present the solution in your own brand, which includes desktop and mobile applications.
- Our VIP domain option - use your own video domain rather than ours.
- Local video nodes - we can put our infrastructure into yours

Please speak to your UCi2i representative to discuss any of these solutions so that we can provide you with a custom quote to suit your requirements.
