Video Conferencing Managed Services in education

Traditionally, high purchase costs, the need to appoint specialist skill sets and infrastructure to support and manage video conferencing, along with the fear and scepticisms of the reliability and benefits of using video, has long kept wide scale adoption at bay.

These challenges are quickly becoming a thing of the past. With UCi2i's video conferencing managed services, we can relieve you from those technical frustrations, costs and infrastructure needs, delivering a reliable, secure, supported, and high quality video experience for all educational needs.

Minimise the need for local and international travel for students and teachers, saving time, money and your carbon footprint.

Enjoy high definition quality and security.

Increase face to face interaction amongst student and teaching groups.

Increase collaboration, interactivity and discussion.

Casting a wider net

Being able to interact and learn face to face via video, wherever you are, is opening up vast opportunities for people who would have previously considered furthering their education an impracticality. Restraints on money, distance, and personal and professional commitments have for too long restricted those passionate about learning.

Growing revenue and cutting costs

Educational institutions are always looking for new ways to cut costs, grow revenue and broaden their appeal. Adopting visual communications as part of everyday teaching not only enables them to do just that, but also helps them differentiate themselves from other institutions by offering flexible, interactive and more collaborative teaching methods.

Video conferencing might seem like a heavy investment, but with UCi2i, you needn't worry about the management, maintenance, security, reliability, quality, logistics or any other perceived cost. Because we take care of all of that for you, with just one simple, fixed and low-cost monthly subscription fee with no hidden charges and unlimited usage - as easy as your fixed mobile phone tariff.

UCi2i is a global Video Managed Services Provider, headquartered in London and Hong Kong.

We help transform organisations by enabling them to use video conferencing as their everyday communications tool.

Saving you both money and time, our services eliminate your need for infrastructure, skill sets and support costs, by providing an all-in-one affordable and fully supported video conferencing service.

See what it can do for you.

For the busy distance learner. Wherever you are. UCi2i

Distance learning

It's not uncommon for distance learners to feel socially disconnected from their educational experience, especially when they lack the face to face collaboration and interactivity they would normally otherwise experience. With video conferencing, distance learners are brought face to face with their teachers, fellow students and peers, creating an inclusive and creative learning community.

It allows students to benefit from the teachings of the world's most respected educational institutions and professionals, wherever they are, without the need to travel or relocate. It also provides students in rural, impoverished, or hard to reach corners of the world the opportunity for equitable educational experiences.

Part time learners

Video learning and collaboration can give those with financial and time pressures the means to access further education that they may have previously deemed impossible or too much of a strain to fit around their day to day lives.

Enhanced teaching techniques

With video you can leverage new teaching resources without students or teachers needing to travel, broadening your curriculum and making sure you meet your government targets. Students can also use video to replay classes for both revision and for when they're unable to attend in person, so they never miss a moment.

Traditionally, with web-casting and streamed tutorials, students are limited to merely watching the lesson. With video conferencing, students can actively participate, join in discussions, give feedback and ask questions, making it an interactive, live and collaborative experience.

Better prepare your students

Video conferencing is being increasingly adopted by businesses all over the world, as their everyday communication tool. Help to better prepare your students for an increasingly competitive workplace by introducing them to video conferencing and collaborative communications before they get there.
